

Wedge Peeling Machine with Drive Unit PTWE

This device is the ideal machine for preparing wedged connections on transport belts for unlimited belt width and length.

Large-dimensioned, knurled drive rolls reliably catch the material and press it through the knife. By means of the star grip screw the material thickness and thereby the pressing power can be exactly adjusted. The easy accessible knife can be quickly changed and is adjustable in several positions thereby ensuring a very good adaptation to any material.

An equal result from the beginning to the end of the cutting point is achieved by the edge that is situated far in front.

Technical Data		PTWE
Belt width max.	mm	unrestricted
Belt thickness max.	mm	7
Wedge length max.	mm	65
Length	mm	350
Width	mm	460
Height	mm	295
Weight (net)	kg	36
Voltage	V	400
Capacity	W	370

Material number	Designation
7870242	PTWE incl. drive unit
